EMPLOYMENT HISTORY

EPAM, Medellin: *Software Engineer*

APR 2022 - PRESENT

- Worked well independently and on a team to solve problems.
- Analyze and propose new ideas to solve problems on the existing functionalities.
- Learn and implement RabbitMQ to deliver messages between applications.
- Checked the logs to verify the correct behavior of the service and if there were issues, I had to verify the entire flow to validate why that's happening and report it to the team with a possible solution.
- Increase the code coverage of the projects creating unit, integration and automation tests.
- Build endpoints to be consumed doing some process and saving data into DynamoDB
- Build a new middleware to replace the old one with some changes and modifications in the logic of the process, also implementing the last version of technologies available for it.

Globant, Medellin: *Software Engineer*

JUN 2021 - APR 2022

- Worked well independently and on a team to solve problems.
- Brought forth experience using and developing APIs.
- Worked to continually meet the expectation of stakeholders and users.
- Improve old functionalities of the software and also improve the code to make it clean and understandable.
- Create scripts in Java to make some functionalities on S3 of AWS, like delete some files that were created for testing.
- Attend and participate in proof of concepts to validate the viability of new technologies on the projects.
- Talk with different members of the team to validate information and make clear the process of some functionalities that would need to be placed in the project.
- Talk with the product team to validate and verify what they are needing on the new development of the functionalities, and also share this information with the dev team to make decisions of
