🔧 Technical skills

JavaScript (Latest features) ●●●●● 11y

Including ES2021. Used in all my previous jobs

TypeScript ●●●●● 6y

I completely switch to use typescript instead js

CSS3 ●●●●● 9y

Flexbox, Grid Layout and newest features

HTML5 ●●●●● 11y

Used in all my previous jobs

React ●●●●● 9y

Including new features as hooks. Redux too

React Native ●●●●● 6y

Experience in both Android and iOS

NodeJS ●●●●● 9y

Used for servers, CLI and Electron Apps

ExpressJS ●●●●● 9y

I used in all my node server projects

MongoDB ●●●●● 5y

Generally used with mongoose as ORM

Vue ●●●○○ 1y

Used once in a project

GraphQL ●●●●● 5y

Used as API experience and data query in services

T-SQL ●●●○○ 2y

Experience consuming data

Git ●●●●● 8y

Used in all my previous jobs. CLI and GUI exp

.net core ●●○○○ 1y

Few experience, only to consume APIs

Go-Lang ●●○○○ 1y

Current learning

AWS ●●●○○ 2y

Used for serverless and custom server S3

Azure ●●●○○ 4y

Used for CI, CD and experience with DevOps PM

Docker ●●●○○ 4y

Medium experience, used in my last 2 job

👜 Professional skills

Teamwork

Proactive

Dedicated

Ease of speech

Leadership

Home office experience

Direct deal with clients

★ Personal features

Languages: Spanish & English

Autodidact

Organized

Funny

Love for teach

Experience

Uber **Cornershop** by Uber

abr 2022 as Technical Lead
Remote working

I originally joined the Cornershop team as a Senior Software Engineer and I have been working on improving the merchant experience through implementing UI enhancements working closely with the UX and services teams. Later, with the complete merger with Uber, I was in charge of developing the UI system used by all Cornershop products. Most of my work consisted of leading team meetings, estimating and assigning tasks, and during development I used Typescript as the main language to develop React components and consume Restful APIs, all within an agile framework in a multidisciplinary and multicultural team.

abr 2021 - abr 2022 as Development Engineer
Remote working

As a Development Engineer, I was on the advertising and marketing team. Part of my team's job was to support and create new experiences so that reddit users feel safe from the ads that appear in the navigation. We worked closely with partners as big as Apple or Microsoft, so that their campaigns were displayed properly. Personally, I have been developing multiple features and providing support with React, Redux, and on specific occasions, making changes to the node server.

aug 2020 - feb 2022 as Technical Lead
Remote working

As a bp technical lead, I'm leading a small team of 4 developers to build a React Native app with Maps integration and different API consumption. Part of my responsibilities is to make architectural decisions on the React Native Project to achieve the project's goals, develop screens, and app functionality; I also create some scripts for Node.js to automate part of the work. The project is managed by SCRUM. Unit testing is running with Jest and React Native Testing Library. The project is a monorepo managed with Lerna and the app is delivered and tested with CI/CD

feb 2020 - aug 2020 as Software Developer
Remote working

As a Full Stack Engineer, I was assigned to a different number of projects, most of all internal services for employees and directors. My main responsibilities were to maintain legacy software written in vanilla javascript and jQuery as well as React applications architected in an isomorphic structure with a Node server.

The code that I worked on in NodeJS was oriented to provide an API structure in REST and GraphQL to React applications written in Typescript and with the latest features such as hooks and complex use of redux.

feb 2019 - feb 2020 as Senior UI Developer
Presential at Guadalajara, Jalisco, México

My main responsibilities were the maintenance and development of internal web applications for customers as full stack developer of React and .net core. Also worked with React Native for mobile Apps and SCRUM for project management. Continuous integration with Azure and continuous delivery with Docker as Microservices. Also having responsibilities in the React Native Architecture and Training process. Also as a part of the new SRE certification I was trained to be Auditor and I configure tools like Splunk, Dynatrace and Code Quality Gates with SonarQube.

jun 2016 - feb 2019 as Software Developer
Remote working

I was assigned to multiple projects, and most of all as technical lead so as a full stack developer my main responsibilities were related to architecture the whole application with Node, GraphQL for Backend; MongoDB and Postgres for Data; and React & Vue, most of all with NextJS for Frontend. All the projects under my command were designed to work with microservices distributed with Docker over AWS technologies. Also I worked with 2 React Native apps as a single developer connected to client services.

ICYTEG (University)

feb 2015 - oct 2016 as Software Developer

Presential at Irapuato, Guanajuato, México

I was assigned to work with the Student's platform as a developer with T-SQL creating Stored Procedures and working with VB as backend and some React for frontend. Also I was involved in architecture decisions and giving IT support for teachers.

sep 2014 - feb 2015 as Junior Software Developer

Presential at Irapuato, Guanajuato, México

Front-end developer with plain HTML, CSS and Javascript, also a different project as a Fullstack developer with NodeJS/ExpressJS and React. IT support.

Note: Also I got amateur experience working with old versions of JavaScript, HTML, and CSS, Flash and jQuery because I started programming in 2008.

Education

UTEL

2014 - 2019 as Computer Systems Engineer

Remote

BUAP Puebla

2013 - 2014 as Public Accountant (Incomplete)

Presential at Puebla, Puebla, México

Certifications
