WORK EXPERIENCE

PlayGreen

Front-end Developer

Bogotá, CO

February 2022 – January 2023

- Collaborated effectively with cross-functional teams to enhance the Progressive Web Application and product dashboard using Vue, TypeScript and SASS/CSS, resulting in a remarkable 25% increase in user satisfaction within 3 months
- Ensured consistent website reliability through regular updates, maintenance, and documentation, resulting in an impressive 93% boost in website performance
- Implemented real-time sports data from Sportradar and Firebase for live match results, team/player statistics, and betting odds; while integrating multilingual support. This contributed to a 30% increase in customer engagement
- Conducted code reviews, identified performance optimizations, and resolved technical issues to improve the platform's scalability, responsiveness, and cross-browser compatibility

ChurchRenewal

Front-end Developer

Norte de Santander, CO

November 2021 - January 2022

- Developed a highly optimized Progressive Web Application (PWA) using Vue, Vuex, and Bootstrap, leading to a 100% surge in user growth and attracting 5+ sponsorships
- Engineered algorithms for efficient data organization from multiple APIs, using JavaScript for caching and data manipulation, reducing data retrieval times by 40%
- Designed and implemented code to detect the app's online status and adjust behavior accordingly, with a strong focus on Service Worker configuration and asynchronous data interception, resulting in a 20% decrease in user-reported errors
- Employed Jest to implement test suites, along with Webpack, ESLint, resulting in a 95% code coverage and significantly reducing bug-related incidents, contributing to improved website reliability
- Implemented robust accessibility features, including text size adjustment, dark mode compatibility, and multilingual support

OlaTech

Front-end Developer

Norte de Santander, CO

April 2021 – September 2021

- Delivered SASS and Tailwind-based UI reusable components to simplify the payment and delivery process, using Vue, JavaScript, and Nuxt.js for routing, data fetching, and multilingual support, resulting in a notable 32% improvement in customer satisfaction
- Collaborated with the marketing team to integrate promotional banners, marketing campaigns, and SEO optimization effectively, driving traffic and boosting sales by 22%
- Created interactive and game-like components using libraries such as Plank.js and Fabric.js to test touchscreen functionality, which achieved 98% user engagement
- Implemented product search and filtering functionalities, enabling users to easily find and compare tech models based on specifications and price, increasing user retention by 35%

EDUCATION

Universidad Nacional Experimental del Táchira

Computer Engineering

Táchira, VE

January 2018 – June 2020
