Professional Profile

Bi-liginal Systems and Computer Engineer of the Catholic University of Colombia. Interests oriented to software engineering, the architecture of technological solutions for optimizing time in the realization of different industrial and everyday processes. Knowledge in programming languages, systems analysis, interface design, and solutions. Experience in technical support and development of software projects. Bold in terms of decision making in situations of pressure, full, good communicator and team worker, is open-minded to listen and apply different solutions to their own.

Education

Academic Bachelor
San Viator School.

Bogotá, 2016

Systems and Computer Engineer
The Catholic University of Colombia.

Bogotá, 2022

Employment

Globant.
Senior Developer.

Date of admission: May 27th 2022

Ending Date : Current Job

Achievements:

- At Disney client I was in charge of creating the DevOps infrastructure from zero, I also worked developing software solutions for the different internal projects. One of them was a movie trailer and commercial administrator console , this application handles the full process of the creation of a video resource for the company (ABC, Natgeo and Disney entertainment).On the other hand I migrate from AWS to Azure two applications on Net framework which front was in react , the services allocated in aws such as s3 , deployments and others were migrated to Azure services, also for this two projects I created the full DevOps structure including different pipelines for the client requirements.

- At ESPN I'm developing two different projects , the first one is an api to handle all the configuration and methods in the process of sending some data (videos and statistics) that are stored in an external provider call Media shuttle , this api has three pipelines that take the DevOps concepts for the fast delivery this because other developers depends on this api changes . The other project for ESPN that I'm working on is a full stack development application to handle the data of NBA matches. This application is developed with net framework, react and the data is managed with SQL , Mongo and Power BI. Is needed to mention that this application has a DevOps structure created by me since the origin

Applied Technologies : Net framework,Entity Framework, React, CI/CD, DevOps, Azure, Docker, Kubernetes, Aws, SQL, Redis, Firebase,Java, Spring boot, kafka , GRPC, Golang

CreaSistemas SAS.

Senior Developer.

Date of admission: February 18th 2021
Ending Date : May 27th 2022

Achievements:

- I developed several functionalities for the exposed chatbots, using technology such as BotFramework and asp .Net core. On the other hand, CI/CD technology was used.
- I also planned and developed a training platform for project investors, this was created with Blockchain technologies, React Js, Asp .Net core, SQL server, and several Azure cloud services. On the other hand, CI/CD technology was used.
- Finally, I made a platform in React to expose an internal support chatbot for a company on the web. Using technologies such as React JS and Asp .Net core.

Applied Technologies : Node, Express,Net framework, Entity Framework, Bot Framework, React, CI/CD, DevOps, Azure,Docker, Kubernetes, SQL, MongoDB, Redis, Block Chain, Java, Spring boot, kafka, Golang

Automated Systems America Colombia SAS.

Technical support and programming.

Date of admission: February 5th 2018
Ending Date : February 18th 2021

Achievements:

- I developed a technical support application that facilitates the collection of files and necessary information to diagnose errors that occur at ATMs while it is in production.

- I also planned and developed complete modules to make automatic processes on the ATMs such as files and configurations cleaning, database restore, and recovery of missed information (transactions).
- Finally, I Performed different types of testing and rigor tests on new versions of the main software (Proflex4).

Applied Technologies : Node, Express,Net framework, Entity Framework, Angular, React, CI/CD, DevOps, Azure, SQL, MongoDB, Firebase, Java, Spring boot
