Profile

Software Engineer with experience in website creation, banking and insurance platforms, e-learning and transportation services. Worked mainly as a full stack developer, focused in last years on backend technologies. Comfortable with working as a member of cross-functional Agile (Scrum) teams

Experience (7 years)

Senior Software Engineer

Avenue Code | August 2023 - Current

- Conducted comprehensive spikes to analyze migration needs, resulting in a well-defined backlog and accurate task estimations.
- Refactored existing code as part of the monolith-to-microservices migration, enhancing readability and leveraging new features available in Java 17.
- Resolved production bugs, ensuring system stability, and provided ongoing support to the team, offering guidance and expertise in task execution.

Software Engineer

EPAM | January 2022 - July 2023

- Migrate business services to Spring Boot and upgrade Java up to v11.
- Performe integration with an external web service to show and download documents.
- Maintenance and bug fixes.

Software Developer

Colegium | June 2021 - December 2021

- Refactored and improved the data model of the communications sending applications.
- Messaging services have been migrated to the cloud.

Senior Java Software Engineer

District Secretary of Education | May 2021 - December 2021

- Developed modules of user register, application offers and legalization of applicants.
- Optimized mass mailing time, reduced from 1 hour to 2 minutes for every 3000 recipients

Full Stack Developer

Ditech | October 2019 - July 2021

- Development of microservices to manage third-party consents by the bank.
- Optimizing REST API Response Time Using Caching.
- Creating background processes to improve performance using queues with Bull.js and Node.js

Full Stack Developer

Periferia IT | March 2019 - September 2019

- API development to generate statistical data with MongoDB pipelines and components with dynamic graphics for visualization.
- Creation of the customization module to generate business cards with Spring Boot, Angular and MongoDB.
