## PROFILE

Passionate Software Engineer with working experience using the MERN stack. Specializing in Front-End development, with knowledge in Back-end development languages such as Golang and block-chain technologies such as Solidity, Truffle, Ganache, Metamask integrations, and Web3.js library. Adept in creating a powerful products in accordance with web standards and best-practices. Able to create and foster positive relationships with my team mates. Knowledgeable and experienced in various web technologies and programming languages, which best promote the overall experience of coding.

## EMPLOYMENT HISTORY

### Senior Software Engineer at EPAM systems, Bogotá (Uber)

October 2021 — Present

Working as senior software engineer in charge of leading teams through the projects, mentoring junior engineers, and giving feedback to candidates.

Using technologies such as Golang, React, Typescript, AWS, Jest, Cypress, Sonarqube, etc.

- Work for Uber as a contractor from February 2022, I provide solutions for the financial related products, a critical part of the company. Developing everything from backend tasks using a wide range of technologies such as Golang, Node, GraphQL and more to help with building customer facing projects such static pages for new products, adjust internal software tools using technologies such as React, Typescript and Cypress. Performing code reviews, checking new merge requests and ensuring the quality of the code. Deprecating old code bases in a smooth seamless way.

### Front-end developer at Codeless, New York City

April 2021 — April 2022

worked with a team of people full of creativity, vision and passion. This makes an exceptional work environment which is ideal for ideas to flow and flourish between my partners, and also for changing the actual e-commerce environment!

We use a broad range of technologies, including Angular, React, GraphQL, CI/CD, Agile methodologies and Node.

### Front-end developer at Soluntech, Delaware

October 2020 — April 2021

I had the chance of working in this amazing SaaS company in which i was part of a dynamic, highly effective and communicative team of people with passion for what they do. We worked across multiple projects, of all types of complexity, with different approaches to the requirements of the clients that best fitted their needs.

Working in a SaaS company, as a lead front end developer who introduced the DevOps culture, making use of automation tools such as CI/CD with github actions and deploying to AWS.

Introduced TDD and E2E testing with cypress. We had a strong AGILE component as a team.

#### **Front-end developer at GPS control, Bogotá**

January 2020 — October 2020

Develop and app that keep track of vehicles through GPS devices,

Worked along with the design and IoT teams, the project was developed in react and deployed to AWS

#### **Web Developer at OPTIMAX, Cali**

January 2019 — December 2019

in this job i build and maintain an e-commerce of my grandpa's business, responsive and professional to help him hop on the digital world and increase his sales. I started the project using wordpress and woocommerce but quickly run out of solutions for new coming issues, so we change to using technologies such as React, Typescript, HTML, CSS, and FIREBASE.

#### **EDUCATION**

#### **COMPUTER SCIENCE DEGREE, UNIVERSITY OF THE VALLEY, cali**

March 2018 — Present

I started studying computer science in this university and i'm totally engaged with it.
