## PROFILE

Passionate Software Developer adept in bringing forth expertise in design, installation, testing and maintenance of software systems. Able to effectively self-manage during independent projects, as well as collaborate as part of a productive team.

4+ years of experience building Restful applications with Java 8 and 17 using Spring framework, applying the knowledge of concepts such as inversion of control, dependency injection, design patterns and SOLID principles, testing with Junit and Jacoco, also handling database connections with JPA and ORMs such as Hibernate.

## EMPLOYMENT HISTORY

### BackEnd SSr Developer, Globant (Wolters Kluwer)

Nov 2022 - now

- Update technical documentation for multiple microservices.
- Review changelogs and automate communication MS teams for new changes.

### BackEnd SSr Developer, Globant (Lessen)

Jan 2022 – Nov 2022

- Worked with spring boot using netflix DGS framework to create Java and Typescript micro services with GraphQL.
- Built micro services super-graph with Apollo Studio and Robert CLI.
- Implement unit tests and integration tests to micro services.
- Use of the Okta Oauth provider API for access management.
- Documentation and workflow diagrams for functionalities.
- Use Kafka to build event producers and consumers between micro services.

JEST

JUNIT

GRAPHQL

DOCKER

## Java SSR Developer, Globant (Autodesk)

Mar 2021 – Jan 2022

- Worked with API BOX Integration for document management, its connection with AWS lambda functions, SQS and AWS S3.
- Modification, cleaning and optimization of the services exposed by the FLC API.
- Creation of a threat model based on Autodesk continuous threat modeling.
- Review of security best practices for configuring AWS lambda functions.
- use of the oauth2 standard for API authorization management.
- Remove and create feature flags/feature toggles.

## FullsStack Developer, Quipux

Sep 2017 – Feb 2021

- Built Restful APIs that served data to a JavaScript AngularJs front-end, based on dynamically chosen user inputs
- Dashboard built for the analysis of graphs, states and processes of massive service order packages with optimal validation times, improving execution performance using multiple threads in parallel.
- Built an independent module for the processing and generation of signed PDF documents, based on the creation of HTML templates. Using the java PDFBox library, to process HTML and images, used by all internal projects of the company, which are in charge of the management, process and sending of legal documents.
- Built a JAR application to view, print and change the status of documents for use by officials in charge of mass printing of documents, capable of processing and validating efficiently multiple documents on the server.

## HOBBIES

---

Drawing, Video-Games,  
Boxing

## EDUCATION

---

**Technical software developer, Héctor Abad Gómez**  
Jan 2015 – Nov 2017

**Software Engineer (Incomplete), Eafit University**  
Jan 2018 – Jan 2020

## COURSES

---

**MatLab course, Medellin university**  
Mar 2017 – Dec 2017
