Personal Skills

- Handle criticism well and learn from it
- Able to work effectively in a cross-functional team that includes designers, developers, project managers...
- Very keen to learn
- Working to short lead times
- Eye for detail

Work experience

- I started working at Powa Technologies, in London, as a Junior Frontend Developer at the beginning of 2014. Powa was a UK-based technology company focused on e-commerce services. During my two-year stay at Powa I was able to work with many talented people from different areas of the company from whom I learned many skills. I worked on the development of a new eCommerce site for one of the leading editors in the UK using the company's own CMS. I also had the chance to work closely with the marketing team on the new rebranded corporate website.
- After Powa I joined easyProperty, also in London, which is an online state agent company based in the UK. During the first two years, along with my colleagues, we updated the old company's dashboard built on php to angular 2. In my last year there, I was part of their newer project, named Eventflow, which was an automated system for state agents to earn commissions through data. I was in charge of developing the dashboard using Angular framework and helped to develop the backend side of it using Flask.
- For over three years now I have been working at Giesecke & Devrient a german company that provides smart carts products, in their Barcelona center. I have been involved in various projects focusing on the frontend side of them.

Frontend developer skills

- Creating visually appealing responsive websites
- Best practices when coding
- Work within a team and also as an individual
- Modular and clean code
- Self-motivated, detail-oriented, and organized
