EXPERIENCE

AE.studio, Brazil— *Full Stack Engineer*

May 2020 - PRESENT

Building products to increase human agency using the most recent technologies for startups as well as large companies in areas ranging from fintech to health.

Projects:

- Worked closely with an agile team to implement rich UIs for a cloud collaboration service. Developed real-time features using web sockets and a state management pattern. Implemented an import tool with data preview that allowed users to visualize and edit the data before importing.
- Worked on a react-native app to help users create new habits. The app was very customizable and its screens were created and populated via CMS. Another differential was the offline mode support.

Arctouch, Brazil— *Software Engineer*

December 2017 - May 2020

As a software engineer, I worked on many different projects for large companies in the US. In my last project, a San Francisco company that's the world's largest online learning community, I helped them to build an API accessed all over the world by millions of users.

Projects:

- Helped the client to create a marketplace foundation by working on different fronts including one-time payments, permissions, notifications, content ratings, and conversion funnel logging.
- Increase the company's revenue while working on the Ads team, focusing on new ad experiences, placements, ad units, and A/B tests.

mobLee, Brazil — *Full Stack developer*

April 2017 - December 2017

As a Full-stack developer, I worked on several projects where I helped to design, implement and test new products related to the events market.

Projects:

- Worked in an agile team to implement a site builder from scratch focused on the events market. Developed the frontend using react and redux and the backend using nodeJs and MongoDB. This tool allowed users to create a website and deploy it in minutes, where they could choose a variety of components from our library.

Sábia Experience S/A, Brazil — *Frontend developer*

September 2016 - March 2017

Implement and test educational experiences to Increase employee's and organization's performance through immersive education.

SKILLS

TypeScript, React, Redux, react-native, firebase, Node.js, PHP, GraphQL, relational and non-relational databases.

INTERESTS

Productivity
Clean code
Javascript

LANGUAGES

Portuguese (Native)
English (Advanced)

Projects:

- Worked closely with Product Managers, the UX team, and other developers to implement beautiful immersive experiences using augmented reality, 360 video/photo view, and many other resources.

Universidade Federal de Santa Catarina, Brazil — *Full Stack developer*

August 2012 - August 2016

Worked closely with the main analyst to define system requirements and implement new modules and plugins for the Moodle project.

Projects:

- Created a plugin to integrate the Moodle platform with the University API so teachers could export the students' grades at the end of the semester.
- Implemented an app that allowed teachers to use a mobile app to take students' attendance using an NFC card.
- Course List. A module that allowed students to visualize all the different courses during college, organized by categories and semesters.

EDUCATION

Universidade Federal de Santa Catarina, Brazil — *Computer Science*
