Hi, I'm Fidel Caicedo
Back end Developer

I'm a Back end Developer, passionate about technology. I know Algorithms, Back-end, Front-end development I currently use JavaScript and Typescript for Back-end, Azure for Cloud and Infrastucture knowledge and applications. currently Interested in NodeJS and Express.

I see software as a way to see how the things you build work in real time and are changing lives and the way we do things. I like to adapt and learn new things that Interest me, I really enjoy working with people and communicating with them, I like to strive for Stability and a nice Work-enviroment with my co-workers and leaders.

Education

Formal Education

Holberton School
2019-2020
FullStack Software Developer

Universidad EAFIT
2017 - Present Day
Systems Engineering

Complementary Education

Platzi
Ruta Back-end Fundamentals of NodeJs.
Practical Front-end Course.

UDEMY
The Complete Node.js Developer Course (3rd Edition).
Microservices with Node JS and React.

Experience

comfama
April 2020 - Present

FullStack Software Developer Jr

Was part of the team of the Team that develop several components for the redesign of Comfama's new website. Including Structuring, styling and functionality according to design and experience layout.
Company flowchart.

Developed a Back-end integration with Api with NodeJs, in which a connection was made to get data from a list from Sharepoint and save data in Microsoft Dataverse Suite.

Full Stack Software Developer

Made Comfama Contengency application when the Pandemy was at it's peak, Registered the entrance of people that visited Comfama's office and also Comfama medical Centers so we could keep track of where the people where, the patiens, etc. Developed both the front end and back end of this application with ReactJs and NodeJs

Made a class website with Comfama's Fitness group so people could do exercise, have yoga, mindfulness exercises in the pandemy for free with Comfama's trainers, a ReactJs Application with Webex Integration so teachers could give class.

Skills

I'm interested in technologies related to JavaScript, Back-end, that allow the development of reliable web apps, I'm also interested in learning new ways of designing application So I can make them reliable, optimal, user friendly and accesible for everyone.

ReactJS
Single Page Applications developmnent, interactive web app creation

Javascript
programming language of of the core technologies of the World Wide Web, alongside HTML and CSS

Css
Made Flex interfaces interactive with the client. Used another CSS tools like SASS and standards of the industry.

Node JS
Back-end programming logic
Restful APIs
Connection to Relational Databases (MySQL)

HTML
Developer Responsive Webpages.
Made use of HTML5 and all it's feature so the code could make sense to the standard.
