PROJECTS

Globant, BeHealthy BeHealthy Reward App Bogotá, Colombia: 2020 - Current

Backend Technical lead, Designed the service architecture for the multi-tenant cloud solution. Responsible for the design and development of new REST API services and web application services. The main tasks are to lead the team to include new features to the product and support high availability and scalability in AWS cloud service. Also implemented OAuth 2 / OpenId, and worked with the security team to comply with Hipaa / GDPR . Additional features such as data ingestion, email, silent notification, and push among other features provide services to mobile apps on IOS and Android. Using Scrum Agile methodology for project operations. I conduct interviews to add new developers to the team and mentor internal people to help increase their skills and improve their careers within the company.

- Create High-Level Architecture, Software Design
- Assist in Meeting with Clients and Stakeholders,Estimation, Evaluate Technical Feasibilities
- Development Cycle (Requirement,Analysis,Design,Implementation,Testing,Delivery)
