Summary

Human being, lover of software development and games. I have over 12 years of experience in software development and architecture. I think software without tests is a dead software. I can't start a project without thinking about continuous integration and delivery and whether the user really needs what is being built.

Experience

Senior Software Engineer
XP Inc.

Feb 2020 - Present (2 years 3 months +)
Working with the company's treasury to develop a platform that compiled XP's funds transactions to check the company health and leverage.

Distributed system to consume different sources of information with different technologies, containerization of applications, development of frontends, creation of unit and integrated tests and CI/CD configuration.
