Professional Studies

2019
Bogotá, Colombia

Computer Science Engineering
Politécnico Grancolombiano College

2014
Bogotá, Colombia

Technologic Studies (Software Analysis and Development)
National Learning Service (SENA)

Laboral Experience

Jan. 2021 – Oct. 2022
Bogotá, Colombia

Scotiabank
Software Developer (semi-senior level)

- Application analysis, design, and coding in Java language for the financial industry, under the following functional and technical aspects:

  - Web applications, using Spring MVC technology, with two level architecture, three level architecture, client/server architecture, etc.
  - Web service clients in REST (JSON) and SOAP (XML), using Java native utilities and frameworks like Spring Boot, Apache CXF.
  - Web services in REST (JSON) and SOAP (XML), using Java native utilities and frameworks like Spring Boot.

- Segment database analysis, design, and coding (SQL Server).

- Web design and development (HTML5, CSS, JavaScript/jQuery, AJAX)

| Jun. 2014 – Aug. 2021 | **CMC Group (CO)** |
| Bogotá, Colombia | Software Developer (semi-senior level) |

- Application analysis, design, and coding in Java language for the financial industry, under the following functional and technical aspects:

  - Desktop applications, without specific architecture patterns o Web applications, without specific architecture patterns o Web applications, using Spring MVC technology, with two level architecture, three level architecture, client/server architecture, etc.
  - Web service clients in REST (JSON) and SOAP (XML), using Java native utilities and frameworks like Spring Boot, Apache CXF.
  - Web services in REST (JSON) and SOAP (XML), using Java native utilities and frameworks like Spring Boot.

- Segment database analysis, design, and coding (Oracle, SQL Server, MySQL, DB2).

- Batch process analysis, design, and coding (for programmed process execution), without human intervention required.

- Web design and development (HTML5, CSS, JavaScript/jQuery, AJAX)

- Staff training (about different technologies and development platforms)

- Technical evaluator and formulator, for recruitment processes

- Proposal analysis and creation for the formulation of software projects, involving distributed systems.

- Project support and tracing in all the life cycle (planning, execution, implementation, and post-implementation)

- Team and project management, using different agile methodologies (Scrum, especially):

  - Project tasks assignment and supervision based on the User Stories and/or the Product Backlog
  - Following-up the Sprint execution and releases
  - Sprint feedback providing for each team member
  - Sprint planning support
