I am a professional, passionate about technology, I code for more than 10 years in different companies. I code using the last Frontend technologies and frameworks; implementing test at the different levels of the software, using GIT and repositories in a workflow with knowledge about cloud computing in management platforms like AWS or Azure to apply CI and CD process, in Agile environments with methodologies like SCRUM and Kanban.

Job' experience

PERFICIENT	PERFICIENT	FullStack Labs	BairesDev
Deloitte (1.4 year)	**Kinesso** (1.3 year)	**Recurly** (1.1 year)	**eVisit** (1.5 year)
2017	2019	2020	2021
Full Stack	QA/Automation	Full Stack	Full Stack

- Development the Builder Survey with a lot of type questions than can be customized in multiple parameters both look and behavior and the conditional dependency between them.
- Maintain the end to end test for the automation of the application and add test for the new modules that are be developed and give to e2e a visibility with integration tests through Azure DevOps.
- Management the Continuous integration and the Continuous Delivery process, review and approve the Pull Request sent by the team, review the builds and releases to the different environments that the app will be deployed

- Design test cases for the stories planned during the sprint and test it manually to complete the task, establishing permanent contact with the Backen and Frontend team to solve the Bugs generated.
- Automate the new cases for the API and E2E and Maintain the E2E Project taking previous task for the backlog coverage and automating them.
- Made the manual regression before to deploying the new changes for the developed App

- Develop the Recurly App, to add new kind of addons for each one of the subscriptions types, this addons require to review all the architecture of the payments handled in the app.
- Participate in the design decisions, new features, and libraries to implement in the project in order to add value for the users.
- Work in test flow writing the unit test, api test,E2E and make the corresponding regresions before each deploying, ensure de quality in each sprint

- Design new flow for fill the practice questions for the Doctors and patients using the Active Admin of RoR and React.
- Access to the staging and production server to do hot fixes and update deprecated features using the terminal and tmux so that there would be no interruptions in the service.
- Lead the developer team absorving the uncertainty and colaborating with them so that they give 100%, achieving the goals of each sprint
